

Assignment #3

CSCI 3341
Operating System
R.H.
Due:

Purpose: Creation and utilization of a named pipe

Problem: Write two different programs to represent two processes A and B. These processes run on the same Linux box but on two different terminals at the same time. Process A accepts a message from the user through the first terminal and Process B displays the message on the second terminal. Process A and B are using a named pipe for communicating the typed message.
